Description of Services Advanced American Construction, Inc. provides marine construction, diving, and industrial services. Projects include the construction of concrete and steel structures, such as docks and piers, bridges, and cofferdams. Marine construction and diving services include underwater construction and surveys; salvage and recovery; dredging; pile driving; installation and repair of pipelines, outfall structures, and underwater power and communication cable; lock and dam fish run enhancement, environmental mitigation and bank protection; and, crane picks and service. Heavy mechanical construction, maintenance, and repairs are provided for both industrial and marine clients with in-house and field machining.

History/Years in Service Advanced American Construction, Inc. (AAC), formerly Advanced American Diving Service, Inc. and M. Cutter Company, is a full-service, marine construction and consulting company located in Portland, Oregon.

Advanced American Diving Service, Inc. (AADS) of Oregon City was co-founded in 1983, by Konrad Schweiger and Kent Cochran. AADS, starting out with small diving and salvage projects, continued to grow and diversify each year with the purchase of new equipment and the successful completion of larger projects. In 1999, AADS acquired the M. Cutter Company of Vancouver, WA, which specialized in machinery and equipment repairs for marine and industrial clients. The companies merged together with AAC in 2005 and consolidated its operations in a new, state-of-the-art, headquarters facilities on the Willamette River in Northwest Portland in May 2006. AAC has the capacity to bond \$50 million projects, and has successfully completed many Port and Corp of Engineer projects.

Geographic Area Served

AAC has performed award-winning projects for public and private clients throughout the western United States. AAC's primary focus has been the Pacific Northwest, working in other states when projects match their expertise.
