- Piling Replacement

### Aquatic Habitat Issues

- Mitigation Plans
- ESA Compliance
- Construction Monitoring
- Post-Project Monitoring

### Wetlands/Critical Areas

- Delineations
- Ratings
- Mitigation Plans
- Site Assessments

**Grette Associates** is an environmental consulting firm specializing in natural resource assessments and permitting compliance throughout the Puget Sound and the greater Pacific Northwest region. Our company's primary emphasis is in permitting and regulatory affairs related to the development of aquatic, shoreline, and wetland projects for a wide variety of public and private clients. We provide services on a wide range of environmental projects, from individual field studies to large-scale conceptual design, permitting, construction, and monitoring of mitigation and restoration projects.

Our team of environmental professionals is well known for their experience in resolving complex aquatic and wetland habitat issues. The solutions we provide clients to regulatory challenges are innovative, practical, and highly successful. Our expertise in regional biology, project implementation, and local, state, and federal regulatory processes allows us to provide these services at the highest standards while remaining accessible to all clients. Our biologists specialize in project planning, inventory, and delineation of wetlands, streams, and plant communities as well as permitting, regulatory compliance, design, and implementation of mitigation and monitoring programs. Our technical capabilities cover freshwater, estuarine, marine, and problematic wetlands. Grette Associates' wetland and shoreline clients range from Washington's smallest Ports to the Ports of Seattle and Tacoma.

Our experienced fisheries and wildlife biologists specialize in habitat assessment, project planning, management and mitigation services as well as agency consultation services. We design and implement habitat mitigation and restoration plans and monitoring programs for projects throughout the Pacific Northwest. We provide data and technical support for project planning, permitting strategy, and management decisions. Our expertise has proven invaluable for Washington's Ports.
