---

With offices in Edmonds, San Francisco and Austin, Coast & Harbor Engineering is able to meet the needs of their clients throughout the country as well as internationally.

Coast & Harbor Engineering is staffed with senior-level professionals specializing in coastal, hydraulic, civil and port engineering. Innovative solution concepts, advanced analysis and modeling technology, and concentrated design experience are hallmarks of our engineers. Our professionals have broad experience and specialties in separate phases of project development and execution; one small team can maintain continuity from project beginning to end and assure that the best expertise is applied at each step. The responsiveness of the firm, depth of expertise, range of experience, attention to detail, and integrity of all our staff benefit the client through efficient project execution and excellent project performance.
